

Project Aethelgard Briefing

Internal Document | Classification: Proprietary | Date: April 2026

1. Overview

Project Aethelgard is a multi-divisional initiative within **Titan Strategic (TS)** aimed at developing the **Aether-Core**, a sustainable energy regulator designed for high-density urban environments. The project represents a significant leap in power-grid stabilization technology.

The project is led by **Dr. Elena Vance**, who reports directly to the Chief Technology Officer (CTO), **Marcus Thorne**. Under their guidance, the project has entered its final integration phase.

Strategic Note: The Aether-Core relies on proprietary modular architecture to ensure rapid deployment and scalability across diverse geographical locations.

2. Operational Structure

The initiative is split into three primary squads, each tasked with a critical component of the system:

- **The Prism Squad:** Responsible for the physical housing and thermal dissipation of the core. They utilize advanced **Crystalline-X** composite materials for superior heat resistance. Lead engineer: **Sarah Chen**.
- **The Flux Squad:** Manages the energy distribution algorithms and software stability. They developed the **Overclock-Protocol** to maximize energy throughput during peak demands. Lead developer: **Jameson Wu**.
- **The Sentinel Squad:** Ensures safety and system security. They implement **Black-Box Logic** to prevent system breaches and unauthorized access.

3. Key Dependencies and Interconnects

The success of Project Aethelgard is underpinned by several historical and corporate relationships:

- **Academic Ties:** Sarah Chen and Jameson Wu are both alumni of the **Aurelius Institute**, which provided the initial patent for the Aether-Core technology.
- **Security Rationale:** Dr. Elena Vance previously worked at Sentinel Squad's primary competitor, **Aegis Systems**. This prior experience is the primary reason she insists on the strict implementation of Black-Box Logic for internal security.
- **Supply Chain:** The Crystalline-X material is sourced exclusively from **Northern Extractives**, a specialized subsidiary of Titan Strategic.
